Author Index for Volume 57 (2002)

Abu-Youssef, S.E., A moment inequality for decreasing (increasing) mean residual life distributions with hypothesis testing application (2) 171–177
Ahmad, I.A., On moment inequalities of the supremum of empirical processes with applications to kernel estimation (3) 215–220
Alvo, M. and J. Park, Multivariate non-parametric tests of trend when the data are incomplete (3) 281–290
Aneiros-Pérez, G., On bandwidth selection in partial linear regression models under dependence (4) 393–401
Arcones, M.A., Large and moderate deviations of empirical processes with nonstandard rates (4) 315–326
Balakrishnan, N. and N. Papadatos, The use of spacings in the estimation of a scale parameter (2) 193–204
Bartoszewicz, J., Mixtures of exponential distributions and stochastic orders (1) 23– 31
Bon, J.-L. and A. Illayk, A note on some new renewal ageing notions (2) 151–155
Chatterjee, K., *see* Choi, K.C. (2) 145–150
Cheng, T.-L. and Y.-S. Chow, On stable convergence in the central limit theorem (4) 307–313
Choi, K.C., K. Chatterjee, A. Das and S. Gupta, Optimality of orthogonally blocked diallels with specific combining abilities (2) 145–150
Choi, Y.H. and Ö. Öztürk, A new class of score generating functions for regression models (2) 205–214
Chow, Y.-S., *see* Cheng, T.-L. (4) 307–313
Cribari-Neto, F., *see* Ferrari, S.L.P. (4) 353–361
da Fonseca, V.G. and C.M. Fonseca, A link between the multivariate cumulative distribution function and the hitting function for random closed sets (2) 179–182
Das, A., *see* Choi, K.C. (2) 145–150
de la Peña, V.H. and I.-M. Zamfirescu, Decoupling and domination inequalities with application to Wald's identity for martingales (2) 157–170
Devroye, L., Simulating Bessel random variables (3) 249–258
Dewan, I. and B.L.S.P. Rao, Central limit theorem for U-statistics of associated random variables (1) 9– 15
Dreier, I. and S. Kotz, A note on the characteristic function of the t-distribution (3) 221–224
Estévez-Pérez, G., On convergence rates for quadratic errors in kernel hazard estimation (3) 231–240
Fang, B.Q., Estimation of the location parameter of the ℓ_1-norm symmetric matrix variate distributions (3) 269–279
Fang, Z., D-optimal designs for polynomial regression models through origin (4) 343–351
Ferrari, S.L.P. and F. Cribari-Neto, Corrected modified profile likelihood heteroskedasticity tests (4) 353–361
Fonseca, C.M., *see* da Fonseca, V.G. (2) 179–182
Furrer, R., M-Estimation for dependent random variables (4) 337–341
Gao, W., *see* Tao, J. (2) 121–131
Genest, C. and F. Verret, The TP_2 ordering of Kimeldorf and Sampson has the normal-agreeing property (4) 387–391
Genest, C., É. Marceau and M. Mesfioui, Upper stop-loss bounds for sums of possibly dependent risks with given means and variances (1) 33– 41
González-Manteiga, W., A. Quintela-del-Río and P. Vieu, A note on variable selection in nonparametric regression with dependent data (3) 259–268
Guo, J., *see* Tao, J. (2) 121–131
Gupta, S., *see* Choi, K.C. (2) 145–150
Ha, J. and S. Lee, Coefficient constancy test in AR-ARCH models (1) 65– 77
Hashorva, E. and J. Hüsler, Remarks on compound Poisson approximation of Gaussian random sequences (1) 1– 8
Hu, T., *see* Wei, G. (4) 375–385
Huang, W.-T. and B. Xu, Some maximal inequalities and complete convergences of negatively associated random sequences (2) 183–191
Hüsler, J., *see* Hashorva, E. (1) 1– 8
Hutson , A.D., Quasi-medians are robust and relatively efficient estimators of a common mean given multivariate normality (4) 403–408
Illayk, A., *see* Bon, J.-L. (2) 151–155
